# CHAITANYA KHANNA

Software Developer
chaitanyakhanna13@gmail.com

## LANGUAGES

JavaScript/ES6
TypeScript
GraphQL
Python
SQL

## LIBRARIES & FRAMEWORKS

ReactJS
Node.js
Redux
Angular

## TECHNOLOGIES

REST APIs
WebSockets
Microservices
Git
Unix

## CERTIFICATIONS

PSD I - Scrum.org

## CONTACTS

GitHub: github.com/c2khanna
LinkedIn: Chaitanya Khanna
Website: chaitanyakhanna.me

## EDUCATION

**University of Waterloo**
BASc Computer Engineering
September 2013 - April 2018

## WORK EXPERIENCE

### **Full Stack Engineer,** YELP INC.

(Python | React | Typescript | GraphQL) - February 2021 - Present

- Led multiple projects that recommend new actions to business owners based on their Yelp Ads performance leading to multi-million dollar revenue growth
- Created various reusable server-driven UI components which surface data-driven insights on the Yelp Ads dashboard and cancel flow to reduce churn
- Improved developer experience by creating a Chrome extension that simplifies batched GraphQL queries and their responses in the browser
- Collaborated with cross-functional and cross-platform partners such as product managers and designers to define scope of the projects
- Actively participated in a company-wide mentorship program as a senior engineer to help other engineers achieve career goals at Yelp

### **Software Consultant,** CAPGEMINI CANADA INC. (MANULIFE)

(Node.js | ReactJS | Redux) - October 2018 - February 2021

- Developed a unified customer login portal for all Manulife products using ReactJS and Node.js
- Implemented state management using Redux to reduce redundant network calls and improve latency
- Designed the architecture for session management to create a seamless single sign-in experience across legacy and modern Manulife products
- Undertook the role of technical lead and managed a team of four developers for a UI reskinning project at Manulife

### **Full Stack Developer,** GO UBIQ INC. (YC S17)

(ReactJS | Redux | SASS) - June 2018 - October 2018

- Developed a new web conferencing application using React and Redux
- Integrated Twilio call API for VOIP and dial out capabilities
- Implemented user feedback over iterations to improve user interface and overall experience

## PROJECTS

### **Key Picker** - github.com/c2khanna/key-picker - KeyPicker

(Angular | Node.js | PostgreSQL | AWS)

- A single-page application which consolidates all mechanical keyboards into one sortable and filterable interface
- Implemented front-end using Angular, Express server in Node.js and PostgreSQL for the mechanical keyboard database
- Used knex.js library to convert filter requests into SQL queries
- Deployed website using AWS S3 for the frontend, EC2 for Express server and RDS for PostgreSQL database

### **Affine Weddings** - github.com/c2khanna/affine_wedding - affineweddings.com

(ReactJS | Node.js | AWS)

- A single-page application website for a local wedding planning company

- Implemented inquiry form by incorporating Amazon Web Services' Lambda functions and Simple Email Service
